

GN 8110

- bridges the world of headsets and computers

Internet telephony is destined to become commonplace as Internet and telephony technologies converge. Now you can take full advantage of PC-based applications. The GN 8110 USB adapter is designed to help you reap the benefits of the next generation Internet-based telephony and USB digital audio solutions. Used together with any GN Netcom headset, you will discover your IP telephone conversation are as face-to-face.

It is the first USB adapter of professional quality featuring Digital Signal Processing (DSP) technology. It provides sound quality levels high enough to enable businesses to fully embrace Internet telephony technology by reducing some of its shortcomings.

By using the GN 8110 adapter together with a headset, you will not only have the various benefits from using a headset but you will also get a far better sound quality within IP telephony. The GN 8110 eliminates the sound quality-robbing interference common to sound-card-based adapters by plugging directly into the computer's USB port, rather than its sound card. The USB connectivity gives you a direct-to-digital sound quality without compatibility problems.

The GN 8110 adapter is easy to connect and delivers consistent, high-quality, digital performance for both PC and Macintosh applications and can be used with any GN Netcom headset.

With the GN 8110 adapter you simply bridge the world of headsets and computers.
